

A horizontal rectangular banner with a background image of a sunset or sunrise over a body of water. The sky is a mix of yellow and orange, and the water is a deep blue. The text "AEC Design process" is centered in a bold, red, serif font.

AEC Design process

Design
Cost Estimation
Specification

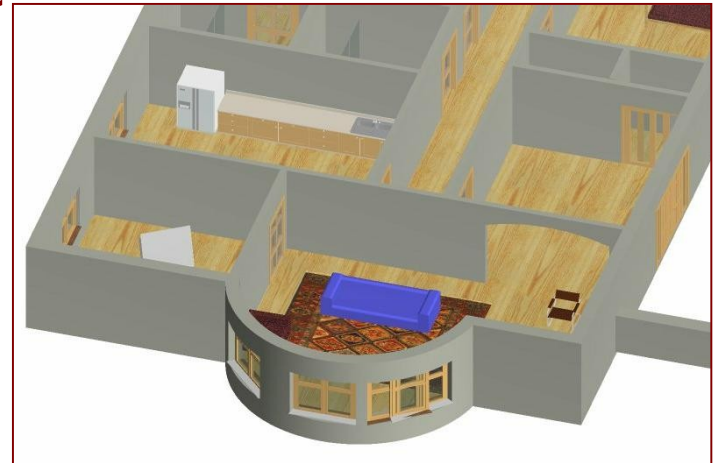

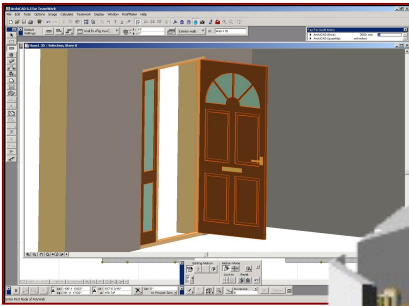

The building

Designers build spaces by using walls, doors, windows, floors, etc.

Each wall, floor, roof, window can be a collection of subcomponents:

- brick
- concrete
- studs

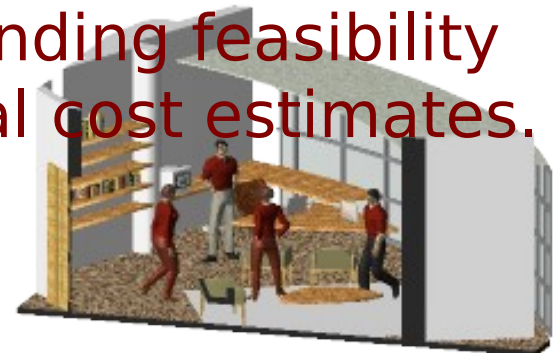

The building

Initially, Designers are usually focused on the general form and organization rather than the detailed subcomponents such as type of wall, door, window or floor.

Initial cost estimates are made from this general information.

The **Unifomat** system is designed around this concept of general information for which specific information will be added later, pending feasibility of the project based upon the initial cost estimates.

AEC Design process

- The Facility Design Business process:
 - Create CAD Model
 - Extract materials Areas, quantities:
 - Send to Cost estimator
 - Extract materials: Specific
 - Send to Specifications Writer
 - Edit CAD Model
 - Reduce area, delete door, window
 - Update cost information
 - Reduce the area multiplier
 - Eliminate Door, Window from cost
 - Update Specifications information
 - Check to see if a section, material needs to be deleted from the specifications.

CADD to Cost to Spec

- Link between the
 - CADD and
 - the Specifications and
 - the Cost Estimating
- The Specifications and Cost estimate depend upon the **current** information in the CAD Model to provide the information necessary for the Specifier and the Cost Estimator to accomplish their role in the building process.

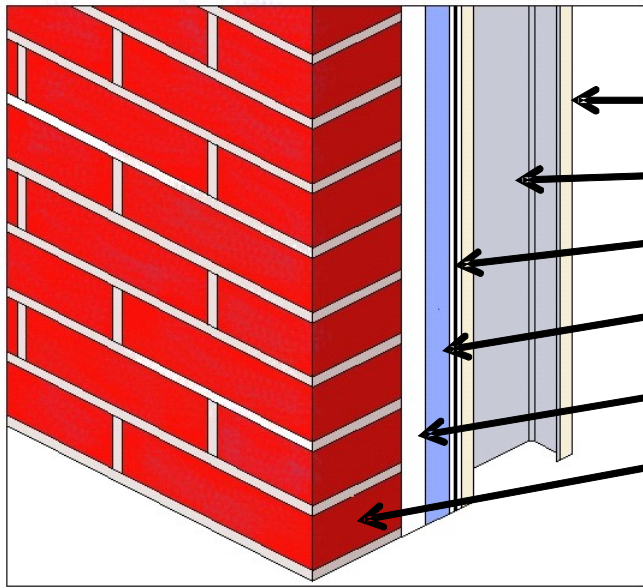

UNIFORMAT II

● UNIFORMAT II Classification

- Classification for Building “Assemblies” for preliminary design and cost estimates.
 - A complete exterior wall is classified as a B2010
 - The wall will be made of multiple components.
 - The wall will be assigned a cost per unit area.

UNIFORMAT II LEVEL 2 GROUP		Ratio Qty/GF A	ELEMENT				Cost per Unit GFA	% Tra de Cost
Level 3 Elements			Qty	Uni t	Rate	Amount		
A10	FOUNDATIONS					45,400	1.00	2.1%
A1010	Standard Foundations	0.21	8,500	FPA	4	32,000	0.7

IFC Material Properties

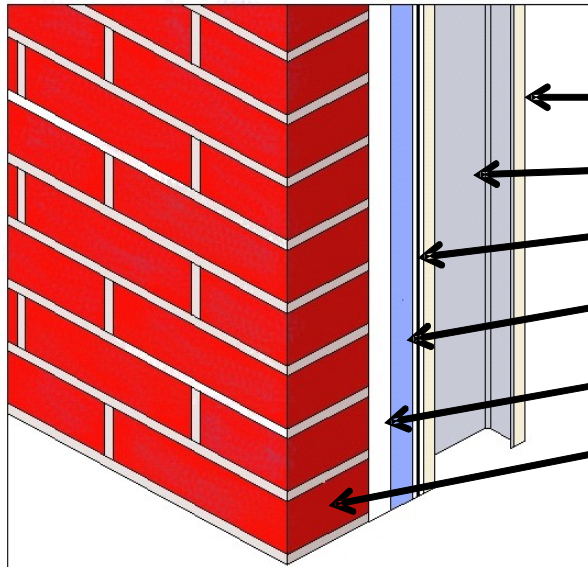

- The IFC Information contains a group of individual materials composing a wall Object.
 - The materials have size information in a standard format, but there is not a standard for the Materials: No standard naming convention.

Wall Type

Wall

Definition from IAI: This enumeration defines the different types of walls an *IfcWallType* object can fulfill:

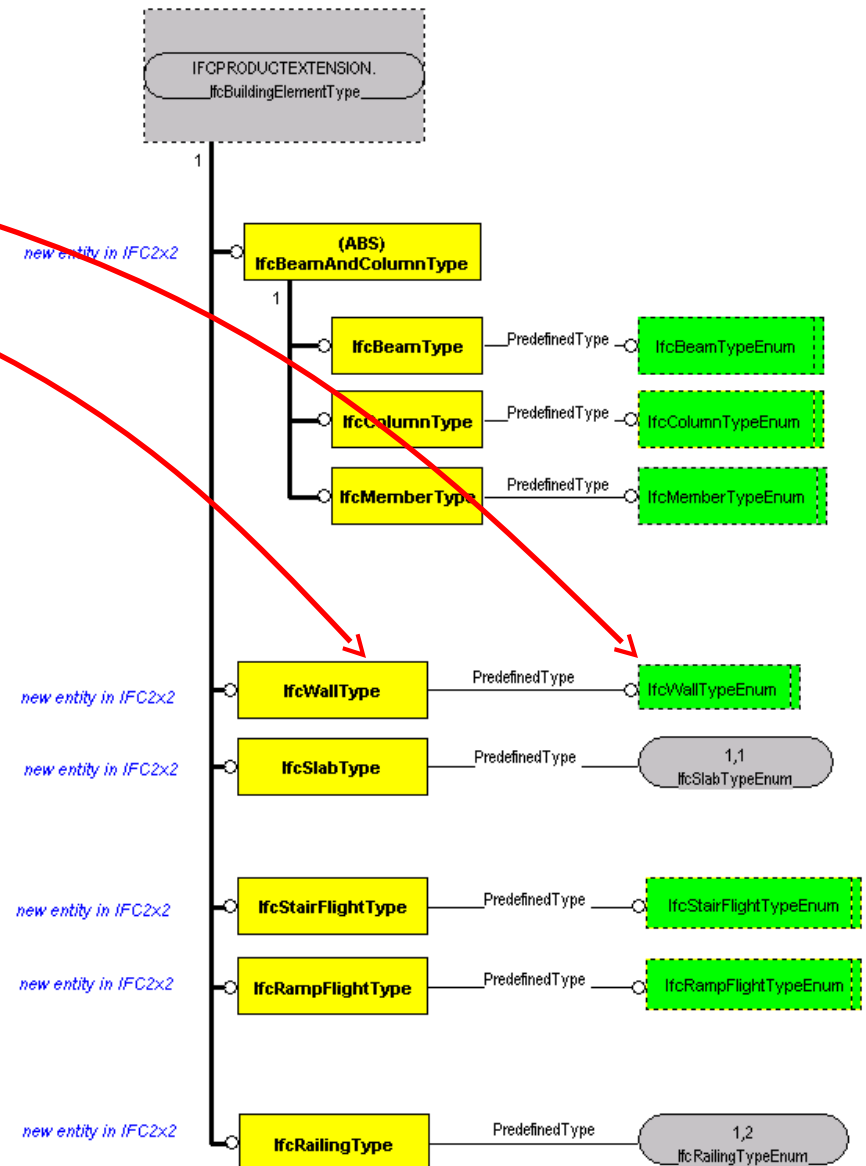

STANDARD: A standard wall, extruded vertically with a constant thickness along the wall path.

POLYGON: A polygonal wall, extruded vertically, where the wall thickness changes along the wall path.

SHEAR: A shear wall, having a non-rectangular cross section.

USERDEFINED: User-defined wall element.

NOTDEFINED: Undefined wall element
